

ADDRESSABLE XTRATONE SOUNDER BEACON

INSTALLATION MANUAL

Description

The Xtratone addressable sounder beacon is a small, high output device, suitable for indoor wall mounted applications.

It is available in red or white and has a selection of 16 alarm tones, selectable at the control panel.

Termination of field wiring is made to the backbox for a clean first fix.

Final Fix

- Set the device address (see address setting)
- Fix the BROWN sounder flying lead to the POSITIVE terminal
- Fix the BLUE sounder flying leads to the RIGHT NEGATIVE terminal
- Screw the sounder body to the backbox
- Fit the sounder front cover

Connections - First Fix

The loop wiring connects to terminals in the back box.

Address Setting

This sounder is addressed via an 8 way dip switch. All 8 switches are used for the address setting. It is a binary arrangement, with ON being the zero position.

Switch	1	2	3	4	5	6	7	8
Value when ON	0	0	0	0	0	0	0	0
Value when Off	1	2	4	8	16	32	64	128

The Switch settings can be calculated using these numbers. EG $21 = 16 + 4 + 1$, so Switches 1, 3 & 5 are off, all the others are on. The maximum address is 250. For convenience a table of all address settings can be found at the end of the manual.

Alternative Soft Addressing Option

Using our hand held MkII programmer (Part No: 48-004), the sounder can be addressed electronically.

Step 1: Set all addresses to zero 0000000

Step 2: Connect leads to LOOP IN+ and LOOP IN- as shown below

Step 3: Follow the procedure as described in the handheld programmer manual.

NOTE: When a device is soft addressed as above, the address CANNOT BE CHANGED by mechanical setting of the dip-switch. In order to re-enable the dip-switch the unit needs to be set electronically back to zero first.

Protocol Usage

The Xtratone sounder beacon works on the Zeta Fyreye II protocol only. The flasher (if fitted) can be triggered independently to the sounder, if the control panel supports that function.

Sounder Synchronisation

The Xtratone sounder beacon supports the Fyreye II sounder synchronisation mechanism.

Alarm Tone Selection

The Xtratone sounder beacon supports alarm tone selection. IE, the installer can decide which alarm tone ALL the sounders will use. The alarm tone can be set for the whole system via the control panel. One of 16 tones can be chosen for the alarm tone.

* Approved Tones

See Document GLT-290-6-1 for further operational data.

Selecting a Reserved tone will cause the sounder to play tone 0. The default alarm tone will be tone 0.

Other Tones

The Xtratone has 3 tones that can be triggered in normal running:-

- Alarm Tone - Selectable - see list above.
- Alert tone - 970Hz intermittent. 0.5s on, 0.5s off
- Emergency - 970Hz intermittent: 3 x 500ms pulses, 1.5s silence, then repeat

The availability of these tones will depend on the Control panel used.

Flasher Setting

The Xtratone sounder beacon has a 4 way dip switch for configuring the flasher. Switches 1 to 3 configure the flasher as shown below. Switch 4 is for future use. Setting 1 gives the specified flasher rating.

Setting	Switch 1	Switch 2	Switch 3	Flash rate	Current	Relative Flasher intensity
1*	OFF	OFF	OFF	0.5 Hz	43mA	100%
2	ON	OFF	OFF	0.33 Hz	18mA	60%
