

NEW

## ULTRA LIGHT HELMET

You no longer have to choose between lightness and comfort!

This new Kong helmet, thanks to its wide internal padding, provides maximum comfort in just 230g. The molding technology of the external polycarbonate layer, with internal high density polystyrene, provides exceptional shock resistance and an incredibly reduced weight.

Certified to CE EN 12492 for climbing and mountaineering.

Equipped with attachments for mounting the optional visor.

The Leef is a great example of structural minimalism. The material that gives it strength is minimized, and present only where necessary. That is what we had in mind during the development of this helmet. Wear it, you'll forget you have it on!

Available in the new petrol/yellow and yellow/amaranth colors to match the new Lario outdoor line!

Product chosen by CNSAS - National Alpine and Speleological Rescue Corps

### Usage activities

CLIMBING

FERRATA

MOUNTAINEERING

CANYONING

CAVING

SNOW & ICE

HELIRESCUE

MOUNTAIN RESCUE

WIND TURBINES
